MS Sprayers Ideal for Secondary Roads, Lots and Driveways

The MS DCG Series sprayers are designed to directly apply deicer liquid to road surfaces. The self-contained MS DCG series is ideal for secondary roads, parking lots and driveways. Features include:

- Available in sizes of 200 or 305 gallons
- Polyethylene tank and powder-coated steel frame
- Centrifugal pump with 5.5-hp gas engine
- Automatic rate controller with in-cab console
- 12' stainless-steel boom, overall width of 83"
- Boom In-Cab control switch
- Numerous optional features are also available

Protect Your Fleet From Corrosion

Constant exposure to water, salt and other deicing materials can lead to rapid corrosion on snow removal equipment. Corrosion also gets into electrical systems, shorting out wiring and electrical connectors. Using a product like Fluid Film has several significant advantages.

Fluid Film protects all metals from the corrosive effects of salts and moisture, and is safe to use on electrical connections. Because it contains no solvents, it remains super slick, making it an excellent release agent for dump bodies, plow blades and snowblower chutes. Fluid Film can also be used during equipment storage and to prevent parts from seizing.

NOT ALL EDGES ARE CREATED EQUAL

FallLine® Polyurethane Cutting Edges are the clear alternative to steel and rubber edges for applications where surface damage is a concern.

FallLine polyurethane edges feature several performance advantages over their steel and rubber counterparts. Using our proprietary formulation, every FallLine edge is engineered for superior abrasion resistance, temperature range, and physical characteristics.

In addition to polyurethane cutting edges, FallLine also offers a complete line of professional snow removal products.

- > Minimize Surface Damage
- > No Unsightly Rust Marks
- > Safe on Pavers and/or Textured Surfaces
- > Low Noise Operation
- > Reduce Costly Equipment Repairs
